

Having Trouble Managing YOUR Crime Scene?

Consider This:

Scribbling frantically on a yellow legal pad in an attempt to record all personnel entering and exiting the scene...

... is **NOT** good Crime Scene Management!

"It can be a daunting task when trying to manage the people and resources that were allowed in the scene."

- Hanover County Sheriff's Office

Managing Crime Scenes

The Hanover Story

It is a common opinion in law enforcement that organizing and documenting the people and equipment at large crime scenes can be an overwhelming task. The Hanover County Sheriff's Office in Virginia learned this lesson all-too-well when they were involved in the DC Sniper investigation in 2002. With over 200 law enforcement personnel at the scene, keeping track of everyone was a daunting task. They had no system in place to track the various law enforcement personnel working the scene. In 2006 Hanover County implemented the EvidenceOnQ™ system to manage their future crime scenes.

scene. Upon arrival at the command post, the investigator checks in and presents their identification.

"It's not a question of if there will be another multi-agency investigation, it's a question of when and where..."

Detective James Trainum -
Washington Metropolitan PD
PERF 2004 Report - Lessons
Learned - DC Sniper Investigation

This information is entered into EvidenceOnQ™ along with their specific duties at the scene. A barcode label is then generated and attached to an identification badge. The badge shows their name, what agency they are from, their duties, and who they report to. They are now authorized to check in at the entrance to the scene.

Your in Control

Powerful and Customizable

The flexibility and versatility is the most appealing feature of EvidenceOnQ™. Each agency dictates the design of their home-screen profile. It allows the agency to have a system that caters to their own specific needs and the purpose for which it is used. Not only is every field determined by the agency, it is also searchable and can be modified at any time to meet the changing needs of the department or individual crime scene.

Lessons Learned

The Hanover Conclusion

The Hanover County Sheriff's Office utilized the lessons they learned from their involvement with the D.C. Sniper Investigation to prepare for the future.

EvidenceOnQ™ gave them the tools necessary for future emergency management situations, along with the additional confidence and security of knowing they will be able to successfully meet future and current crime scene challenges.

"The EvidenceOnQ™ system gives us the tools necessary for future emergency management situations, and the confidence and security to know they will be able to successfully meet the challenge"

Hanover County Sheriff's Office

Scene Credentials

Check in-and-out

The EvidenceOnQ™ system is housed on a laptop computer. In the event of a major emergency management situation, the database is used from the command post (regardless of how far away it is from the actual scene) to manage the people and equipment at the incident
