

QuartermasterOnQ™

Beyond the Property Room?

Track This:

Using the QuartermasterOnQ™ for your Quartermaster needs helps solve the questions of ... **“What does this officer have? Where is this? How many are in stock? When do I buy more?”**

Quartermaster Benefits

Law enforcement agencies are discovering the efficiency of using the QuartermasterOnQ™ to manage their officer issued equipment. The customized homescreen is designed to help track everything from uniforms, vests, and leather gear to weapons and radios. The system indicates whether it is in stock or assigned to a specific officer, while maintaining a complete history of each item electronically and unalterable.

Barcode Tracking:

Barcodes provide quick, key-less, and error-free retrieval and transfer capability to the user. QuartermasterOnQ™ manages items, boxes, and locations using barcodes.

Customized Searches:

Every field on the profile screen is searchable, allowing for ANY combination of search criteria. Allowing you to find what you need quickly and easily.

Signature Capture:

Officers can sign for their equipment, and then the system prints out a list of what is assigned to that officer and includes their signature.

Track your Fleet

You can use the same database to manage your fleet. It will track when a vehicle was put into service, who it is assigned to, when it is due for service, and or any major repairs performed.

Customized Profile Screen:

FileOnQ provides complete flexibility by allowing the customer to dictate the design of the profile screen. You use your own terminology and codes, and provide fields that are unique to your department's equipment and asset management needs.

Audits & Inventories: Audits are streamlined by providing information immediately rather than going to paperwork and files for information. Inventories can be performed in a fraction of the time.

Time Management: QuartermasterOnQ™ will automate every aspect of managing officer issued equipment such as data entry, searches, inventory, and much more.
